

# Workforce Management And Site Security In One

Solar Gates is delighted to be working in partnership with SiteCircle to offer a brand new innovative workforce management solution that links the workforce arrival to their designated worksite with a barrier powered by green energy.

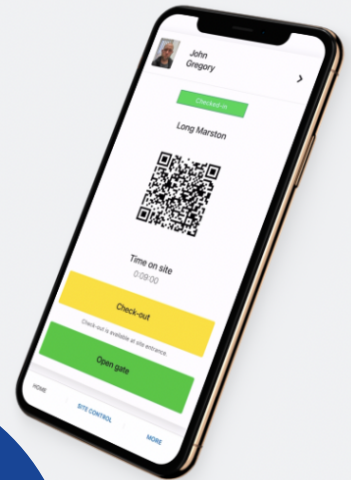

This innovative workforce management solution app delivers site inductions and performs CSCS/CITB checks for all contractors eliminating the time to do this in an office environment. Once a contractor is approved, this links to an award winning mobile barrier powered by solar energy to grant access at a click of a button.

SiteCircle gives you control of the contractors allowed onto each site, tracks their movements, time sheets and checks their eligibility to work. Once an approved contractor arrives at site, they enter via the Solar Gates UK solar/hybrid powered entrance barrier at the click of a button.

## OPEN GATE

Simply click the 'Open gate' button to access your site.

Save Time  
Improve Safety  
Cut Carbon

As your site entrance moves with the development, so does the mobile barrier, just pick it up and redeploy where ever it's needed.

The workforce management system works in tandem with the whole range of Solar Gates UK fully mobile barriers and GS6 over height detection that your site requires. Our barriers are the perfect alternative to manned security and be customised as per your request.
