INSTABOOM GO
SOLAR POWERED, REMOTE OPERATED,
TRAFFIC MANAGEMENT

**"Remotely
controlled Stop/Go
boards should be
used where
possible."**

*Safety at Street Works and
Road Works
A Code of Practice*

INSTABOOM Go is a portable, remote operated, solar powered Stop/Go board. Allowing short-term traffic works to be controlled efficiently in an instant. Designed to make stop/go works safer and easier, it is deployed by one person. The system is controlled from a safe distance, enhancing the safety of both the operator and motorists. By removing the operative from the road, it significantly reduces the need for workers to encounter live traffic or physical abuse.

INSTABOOM Go's bespoke software has been meticulously designed with built-in safety protocols to prioritise user safety and operational efficiency. A robust two-way radio link prevents a "double go" scenario, a critical safeguard that eliminates the risk of conflicting signals.

Powered by a solar/hybrid system, **INSTABOOM Go** can run for 10 days of 10-hour shifts (with two turns per minute) without charging. When needed, it's easily recharged at home, in a depot, or simply by leaving it in the sun.
